## OCTOBER IS DOWN SYNDROME AWARENESS MONTH!

## A FEW FACTS ABOUT DOWN SYNDROME:

- Down syndrome occurs randomly at conception. It is not caused by anything done during pregnancy.
- Down syndrome is not an illness or disease. It is simply part of an individual's genetic makeup, just like eye color or hair color.

- While there are physical features associated with Down syndrome, each individual is unique in what features they may exhibit. They will look more like their family than anyone else!
- 80% of babies with Down syndrome are born to women under age 35.
- Down syndrome is not an affliction. Although there may be certain challenges, it by no means makes a person's life any less valuable or enriched than anyone else's.
- People with Down syndrome are not always happy! Just like all people, individuals with Down syndrome show a large range of emotions.
- Life expectancy is more than 60 years, compared to only 25 in 1980.
- People don't have mild or severe Down syndrome. You either have it or you don't. Ability is not dependent on the condition, but rather the individual.
- Kids with Down syndrome go through the same milestones as all other kids, although those milestones may take longer to achieve. But really, all kids develop at their own pace!
- Adults with Down syndrome attend work, run their own businesses, participate in decisions that affect them, have meaningful relationships, vote, and contribute to society. Watch Born This Way on A&E!
